

# Premier Concepts

## Product Maintenance Guidelines

Premier Concepts utilizes a wide range of materials, finishes, and substrates across our product line. These range from solid woods, veneers, laminates, foams, and composites. Due to the potential impact on the finish of our products, we've outlined a standard set of maintenance guidelines that will work for all of our products. Please follow these guidelines when cleaning all Premier Concepts products to avoid damaging the finish and voiding the warranty. View our warranty page for more information.

- Keep products free of dust and dirt.
- Cleaning is only recommended for the finished face of the product.

- A commercial vacuum system with natural hair bristle attachment is recommended for removing dust particles.
- Avoid excessive pressure to minimize potential damage to the surface.

- Only use a clean damp cloth or soft sponge with a mild, clear detergent.
- Dyed liquids can permanently discolor the finish.
- For all cleaning products, please consult the manufacturers guidelines.

- Dry any excess moisture with a clean, white microfiber cloth.
- Finish could become damaged if moisture is not removed.
